

OT INCIDENT RESPONSE

**Respond Faster. Recover Safer.
Protect Operations.**

When cyber incidents impact industrial operations, every decision matters. Mithryl Systems OT Incident Response provides retainer backed, safety first response capabilities that help organizations triage threats, coordinate response, contain incidents safely, restore operations, and continuously improve resilience across converged IT and OT environments.

SAFETY FIRST RESPONSE

Contain threats while protecting production and operational safety.

INCIDENT COMMAND

Structured coordination between cybersecurity, operations, leadership, and safety teams.

CONTINUOUS IMPROVEMENT

Every incident strengthens future detections, playbooks, and operational resilience.

THE CHALLENGE

An incident response plan is not the same as incident response capability.

Many organizations have documented plans, but lack experienced incident commanders, OT aware containment procedures, tested playbooks, and operational coordination when an actual event occurs.

The result is longer outages, higher costs, increased operational risk, and repeated incidents.

FROM INCIDENT TO OPERATIONAL RECOVERY

Operational Recovery. Operational Confidence.

Mithryl Systems OT Incident Response helps you recover faster, reduce risk, and build lasting operational resilience after every incident.

Get the response capability you need.
Get back to what matters.

THE MITHRYL INCIDENT RESPONSE MODEL

End-to-end response excellence for industrial environments.

WHY CUSTOMERS TRUST MITHRYL SYSTEMS

SEPARATE DISCIPLINES, BETTER OUTCOMES
Incident Response restores operations. Digital Forensics produces defensible findings. Separating the two protects both outcomes.

SAFETY-FIRST OT CONTAINMENT
Containment actions are reviewed against operational state and process safety to avoid creating additional risk.

PURDUE-ZONE-AWARE RESPONSE
Response actions are designed for the affected Purdue Level. One size does not fit all in OT.

OPERATIONS-INTEGRATED COMMAND
Our incident commander works alongside operations, plant leadership, and safety. Cyber recommends. Operations decides.

PLAYBOOK-DRIVEN RESPONSE
Retained clients receive tested playbooks and tabletop exercises before an incident occurs.

REGULATORY CLOCK AWARENESS
We track CISA CIRCIA, TSA directives, NERC CIP, NIS2, SEC disclosure, insurance, and contractual reporting clocks.

CLOSED LOOP WITH IMPROVEMENT
Every incident feeds detection gaps, TTPs, and lessons learned into detection engineering and playbook refinement.

HOW OT INCIDENT RESPONSE WORKS

DELIVERING MEASURABLE BUSINESS VALUE

Operational Recovery. Operational Confidence.

Mithryl Systems OT Incident Response helps you recover faster, reduce risk, and build lasting operational resilience after every incident.

Get the response capability you need.
Get back to what matters.
